

**IF LOW-GRADE
GLASS CAN RUIN
A PREMIUM
WATCH...**

**IMAGINE WHAT
IT COULD DO TO
YOUR FRAME...**

Don't trade your long-term reputation for short-term savings.

Your reputation is built on the details. A premium watch with low-grade glass weakens the entire impression — just as float glass does in a fine frame.

**Protect your name.
Choose Artglass.**

ARTGLASS AR 70

THE STANDARD OF QUALITY

True clarity isn't just a claim—it is engineered. Here is why Artglass AR 70 outperforms Float AR glass.

**PREMIUM LOW-IRON
SUBSTRATE FOR TRUE
TRANSPARENCY**

**2MM THICKNESS FOR EASY
HANDLING, AND A TOP COATING
FOR EFFORTLESS CLEANING**

**CONSISTENT QUALITY
FROM EDGE-TO-EDGE,
NO COLOR SHIFT**

Float glass contains iron, which gives it a **green tint** and can change the look of artwork. Artglass AR 70 is made with premium low-iron glass, so colors stay clear and natural.

STANDARD FLOAT AR FORCES YOU TO COMPROMISE. ARTGLASS DOESN'T.

Artglass AR 70 combines advanced nano-coating with a premium low-iron base to achieve up to 99% light transmission and just 0.6% reflection.

THE RESULT:

- **clear color**
- **sharp detail**
- **easy handling**
